#### **Coordinating Board Mission**

The Texas Higher Education Coordinating Board's mission is to work with the Legislature, Governor, governing boards, higher education institutions and other entities to provide the people of Texas the widest access to higher education of the highest quality in the most efficient manner.

THECB Strategic Plan

#### **Coordinating Board Philosophy**

The Texas Higher Education Coordinating Board will promote access to quality higher education across the state with the conviction that access without quality is mediocrity and that quality without access is unacceptable. The Board will be open, ethical, responsive, and committed to public service. The Board will approach its work with a sense of purpose and responsibility to the people of Texas and is committed to the best use of public monies. The Coordinating Board will engage in actions that add value to Texas and to higher education; the agency will avoid efforts that do not add value or that are duplicated by other entities.

THECB Strategic Plan

#### **Executive Summary**

Texas Education Code, Section 61.0582 requires that the Texas Higher Education Coordinating Board collect information on new construction, major repair and rehabilitation projects, and deferred maintenance needs at public universities, health-related institutions, the Lamar State Colleges, and the Texas State Technical Colleges. In the past, the Coordinating Board has implemented that requirement by collecting four Master Plan (MP) reports each year:

- MP1 identifies all construction, renovation, information resources, and land acquisitions planned by institutions as capital expenditures; this report is consolidated with the Bond Review Board Capital Expenditures Report for all institutions and state agencies.
- MP2 identifies current accumulated deferred maintenance needs.
- MP3 lists projects planned to address accumulated deferred maintenance needs in the next five years.
- MP4 lists actual expenditures on accumulated deferred maintenance in the most recent fiscal year.

This report summarizes the deferred maintenance reported in the MP2, MP3, and MP4 submissions filed in October 2003. Highlights of this report on deferred maintenance include:

- The amount of money needed to address accumulated deferred maintenance is reported to be \$528.3 million (\$512.9 million in E&G facilities) as of October 2003, down from the \$542.2 million reported in FY 2002.
- Replacement values for Educational and General (E&G) assignable space rose approximately 7 percent from \$14.4 billion in fiscal year FY 2002 to \$15.5 billion in FY 2003.
- Physical space increased from FY 2002 to FY 2003 with an additional 4.97 million gross square feet, 2.42 million net assignable square feet, and 2.96 million E&G square feet added to institutional inventories.
- Total projected expenditures reported in FY 2002 for accumulated deferred maintenance in FY 2003 were \$123.6 million; however, actual expenditures were flat with a 0.05 percent increase from \$105.50 million in FY 2002 to \$105.56 million in FY 2003.
- The estimated cost of reducing total accumulated deferred maintenance statewide decreased from 3.6 percent of replacement value of total E&G space in FY 2002 to 3.3 percent in FY 2003.
- Critical deferred maintenance, which refers to maintenance that places the institution's facilities, occupants, or mission at risk, decreased from 0.49 percent of replacement value of total space in FY 2002 to 0.19 percent in FY 2003.
- Critical deferred maintenance in auxiliary facilities decreased for the third year in a row, to approximately \$15.4 million.

#### The Campus Master Planning Process

The Texas Education Code, Section 61.0582, gives the Texas Higher Education Coordinating Board responsibility to collect planning information from institutions of higher education and to use that information for evaluating and approving campus construction and land acquisition projects.

Section 17.40 of the Coordinating Board's rules and regulations provide the mechanisms for fulfilling the intent of the law.

#### Section 17.40 Required Reports

All general academic institutions, Texas State Technical Colleges, health-related institutions, Lamar State Colleges, and Texas A&M University System service agencies are required to submit current data to the Coordinating Board for the following reports.

(1) Campus Master Plans

(A) The Coordinating Board shall consider projects that are included in campus master plan reports. A project that is not included in the master plan may be considered if the Board determines that the institution, even with careful planning, could not reasonably have foreseen the project need.

(B) Campus Master Plan (MP1) shall include:

(i) any proposed new construction greater than \$250,000, repair and rehabilitation greater than \$1,000,000, information resource project greater than \$1,000,000, and property purchase for any amount that may be submitted within the next five years to the Coordinating Board;

(ii) the funding source for any planned project identified in paragraph (1)(B)(i) of this subsection that is not exempt from Coordinating Board review; and

(iii) a description of the proposals that the institution plans to finance with the Higher Education Assistance Fund or Permanent University Fund (Article VII, Section 17 or 18, of the Texas Constitution).

(C) On or before July 1 of every other year, beginning in 2002, an institution must submit an update to its Campus Master Plan (MP1) on file with the Coordinating Board.

(D) Campus Master Plan (MP2) shall include a list of an institution's facilities deferred maintenance needs that cost greater than \$10,000.

(E) Campus Master Plan (MP3) shall include amount the institution plans to designate each fiscal year for the next five years to address the deferred maintenance listed in paragraph (1)(D) of this subsection.

(F) Campus Master Plan (MP4) shall include amount of deferred maintenance addressed in previous fiscal year.

(G) On October 15 of each year, institutions must submit an update to its Campus Master Plans (MP2), (MP3), and (MP4) on file at the Coordinating Board.

The Texas Higher Education Coordinating Board implemented the campus master planning process by adopting rules that require institutions to submit the following reports each year. These reports are briefly described as follows:

- MP 1: A list of all construction, renovation, and information resources projects and land acquisitions planned for the following five years. This report does not include routine maintenance projects less than \$2 million, but it does include all other projects that will be placed on the agenda for Coordinating Board consideration. In March 2002, the MP1 report was incorporated into the Bond Review Board's biennial Capital Expenditure Report for the Texas Legislature.
- MP 2: A detailed report of institutional programs to address deferred maintenance and critical deferred maintenance. This may include postponed renewal and replacement maintenance, unperformed or unscheduled repairs, and planned maintenance. *Critical deferred maintenance* includes deferred maintenance projects that place facilities, occupants, or mission at risk.
- MP 3: A schedule for addressing the projects listed in the MP2. This report includes projects planned for the next five fiscal years to address accumulated deferred maintenance.
- MP 4: A list of actual expenditures for accumulated deferred maintenance projects that occurred during the previous fiscal year.

The MP1 reports, collected in June 2002, cover planned expenditures for Fiscal Years 2003 through 2007. Results were presented to the Coordinating Board in October 2002 and are included in a separate publication. The next MP1 report will be published in fall 2004.

The MP2, MP3, and MP4 reports, collected from each institution by the Coordinating Board's Office of Campus Planning each October, are compiled into a master database, summarized, reviewed by the Committee on Campus Planning, and provided to the Coordinating Board for approval.

This report is devoted to the summaries of MP2, MP3, and MP4 reports filed in October 2003, covering deferred maintenance for Fiscal Years 2004 through 2008 and expenditures made in FY 2003.

#### An Overview of Facilities in Texas Public Universities, Health-Related Institutions, and Texas State Technical Colleges

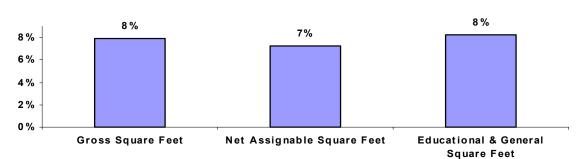

This report provides information about facilities at Texas public universities, the Lamar State Colleges, health-related institutions, and Texas State Technical Colleges. Texas public community colleges are not required to be reviewed and are not included because they are state-assisted institutions that must support their facilities from local funds or *ad valorem* tax funds.

#### Space

The 37 public universities and state colleges, nine health-related institutions, and the four Texas State Technical Colleges together occupy over 145 million gross square feet. The estimated replacement value, which is based on 53.9 million square feet of education and general space, is approximately \$15.5 billion, or \$3.48 per square foot, an increase of 7 percent over FY 2002 and 31 percent over FY 2000.

The space requirement for institutions of higher education has increased with enrollments. In general, enrollments and facilities grew at a relatively slow rate until the 1950s. From 1950 through the early 1970s, there was an unprecedented building boom at Texas institutions of higher education. Several new campuses were created and a number of major additions were made to existing campuses. Between the mid-1970s and the early 1990s, the growth of campuses slowed considerably. The Legislature substantially increased funding for the construction of new facilities during the remainder of the 1990s.

Today, institutions of higher education in aggregate continue to grow at a modest rate. Graph 1 shows that since FY 2000, gross square feet (GSF) has increased 8 percent, net assignable square feet (NASF) has increased 7 percent, and educational and general square feet (E&G SF) has increased 8 percent. Health related institutions (HRIs) report the greatest increase in GSF and in NASF at 10 percent each. Universities and state colleges account for highest increase in E&G SF at 9 percent.

Source: Summary of Campus Master Plans 2001, 2002 and 2003 and THECB Facilities Invetory, 2004.

Institutions understand the need to provide adequate space for forecasted student population growth. As a result, they are reviewing their master plans to determine the best use of funds – construct new buildings or maintain existing structures. As the aging buildings constructed during the building boom begin to require more maintenance, and institutions spend more money to address these issues, deferred maintenance has become a major concern statewide.

Many types of facilities are part of institutions of higher education. The composition of these facilities can be general, such as those buildings that house classrooms, libraries, and offices. Facilities can also serve various research, agricultural, and athletic functions. Bookstores, student unions, cafeterias and residence halls make up the ancillary buildings needed to support a better learning environment. In general, facilities are categorized as follows:

- <u>General Purpose Buildings</u> classroom, laboratory, office and research buildings, and any other buildings related to the administration of these functions.
- <u>Auxiliary Services</u> student unions, infirmaries, bookstores, intercollegiate athletics buildings, parking garages, and similar self-funding facilities.
- <u>Physical Plant Buildings</u> power plants, maintenance facilities, and all buildings related to the physical plant.
- Agricultural Services Buildings facilities for housing livestock, barns, and silos.
- <u>Residence Facilities</u> dorms, fraternity houses, apartments, and family housing.
- <u>Hospitals/Clinics</u> medical related facilities.
- <u>Renovations</u> facilities that are temporarily taken out of service for major repair and renovation.

#### **Replacement Value**

The State of Texas has invested billions of dollars for the construction and maintenance of facilities related to higher education. This investment is currently represented by the replacement value for E&G SF that is calculated for each institution. The method for calculating building replacement value for public higher education institutions has been a topic of debate for many years. Prior to 1998, this value was used to determine funding allocations. Although no longer used for such a purpose, building replacement value is still used as one measure of the validity of construction projects that are submitted to the Coordinating Board for approval.

Until 1998, replacement value was calculated by the Coordinating Board based on coefficients obtained from the Markel Appraisal Chart, a chart published semi-annually by the Markel Appraisal Company, Inc. and commonly used in the public and private sectors to determine building insurance coverage. However, once it was decided that building replacement value was no longer useful in determining funding allocation; its calculation was no longer performed.

The current formula to determine replacement value relies on information derived from the Coordinating Board's Facilities Inventory and *R.S. Means Square Foot Costs 2003*, R.S. Means Construction Publishers and Consultants, Kingston, MA, 2002. The calculations are based on:

- Location Adjustment Coefficient (LAC) derived from costs of constructing like buildings and compared to the cost of constructing the same building in Houston, which currently has the highest construction costs in Texas.
- Room Adjustment Coefficient (RAC) derived from the room type and compared to like building categories. This year the "classroom" room type was used as the base because the majority of new construction was for classroom buildings. Last year the "office" room type was used.
- Baseline Value derived from the construction costs of the 10 most recent approved
  office and classroom buildings. The cost per square foot is calculated by adding the
  building construction costs and the fixed equipment costs and related fees, then dividing
  the result by the GSF. The cost per square foot is then adjusted using the LAC and a
  time factor that is obtained by R.S. Means.

#### Appendices

**Appendix A** – presents summaries of the Master Plan reports submitted by each institution and the replacement value to deferred maintenance ratio for each.

Table 1, *Replacement Value of Total Available Space, FY 2004,* provides a summary of estimated replacement value for E&G NASF at each institution. The FY 2003 replacement value for all institutions included in the report is \$15.5 billion, and the cost of deferred maintenance is \$528.3 million.

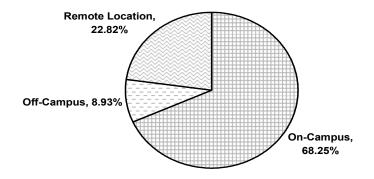

**Appendix B** - provides a summary of various building related information by institution.

As of April 2004, the institutions reported a total of 6,305 buildings in their facilities inventories. Of the 6,305 facilities reported, 5,746 buildings, or 91 percent are currently under title to the institutions. The remaining 9 percent are not titled to the institutions but leased, made available to the institutions at a nominal rate or no fee, or are shared with other educational and non-educational institutions. Maintenance for these buildings is typically the responsibility of the vested owner. Table 6, *Building Ownership, April 2004,* summarizes building ownership on each campus.

The average age of public higher education facilities is approximately 26 years, with the oldest constructed in 1846. The universities have the oldest average building age of approximately 31 years, followed by the technical colleges with an average of approximately 24 years, and the health-related institutions with an average age of approximately 22 years.

As illustrated in Graph 2, *Facility Locations April 2004*, the majority of facilities are located on the main campuses. About one-third are located off-campus; however, the majority of those located off-campus consist of health-related institution facilities and are either a branch of the main campus or a specialized campus. Facilities at remote locations are in areas that are not contiguous to the main campus and yet are not a separate specialized campus. Most of these facilities belong to one of the various Texas A&M University agencies. Table 7, *Building Location and Building Age, April 2004*, provides an overview of campus building location and age.

Graph 2 Facility Locations, April 2004

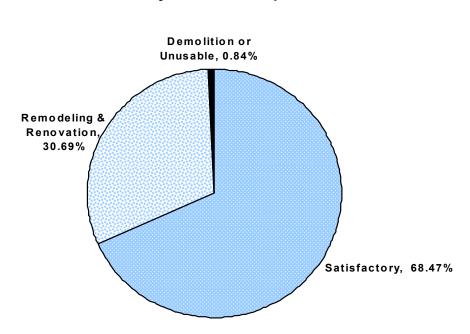

**Appendix C**, *Replacement Value Calculations and Summaries,* provides an overview of replacement value calculations and summarizes the results by institution.

It takes many types of facilities to meet the mission needs of an institution of higher education. The majority of these buildings are classified as general purpose facilities and account for 43 percent of all buildings, while 22 percent are residential facilities. The remaining building types are agricultural service buildings (15 percent), physical plant and maintenance buildings (10 percent), and the remaining 10 percent include non-institutional agency buildings, rental property, hospitals and clinics, and buildings currently under renovation. Table 8, *Building Functional Type, April 2004,* summarizes the number and type of buildings on each campus.

Graph 3 illustrates the current condition of all institutional facilities. Institutions evaluate their facilities and assign a condition code for each building. The buildings are categorized as being in satisfactory condition, requiring some degree of renovation or remodeling, or unusable or scheduled for demolition. Buildings listed as satisfactory are suitable for continued use with only normal maintenance required. Buildings identified as requiring remodeling range from those requiring repair or renovation at a cost of 25 percent or less of the building's replacement value to those requiring repair or renovation at a cost that would exceed 50 percent of the building's replacement value.

The institutions report that approximately two-thirds of the state's facilities of higher education are in satisfactory condition. Approximately one-third is in need of some form of remodeling or renovation. Less than 1 percent of the buildings are unused, unusable, or scheduled for demolition. Table 9, *Building Condition, April 2004*, summarizes the number of facilities by condition on each campus.

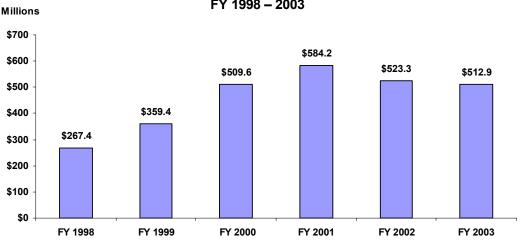

Source: April 2004 THECB Facilities Inventory

#### **Accumulated Deferred Maintenance Needs**

*Closing the Gaps by 2015*, the State's education plan, was adopted in 2000 and establishes goals to enroll an additional 500,000 students, increase the number of nationally recognized programs, and increase by 50 percent federal research funding to Texas institutions by 2015. To meet these goals, institutions must allocate adequate funds for their facilities – both to construct additional space and to maintain existing space. The allocation of funds between the two is primarily left to each institution's discretion, but the backlog of deferred maintenance impedes the state's ability to "close the gaps."

Over recent years, deferred maintenance needs have increased. The cause of this increase has been attributed to a number of factors, including the lack of adequate funds to meet the maintenance requirements of these facilities. Institutions also routinely choose to defer non-critical projects to later years, redirecting resources toward new construction or to address critical maintenance issues.

Costs for accumulated deferred maintenance continue to fall when compared to FY 2001, when deferred maintenance last peaked. Graph 4 indicates that deferred maintenance costs have decreased by \$71.3 million, or 12 percent, since peaking at \$584.2 million in FY 2001. Reported deferred maintenance in FY 2003 was \$512.9 million, a 2 percent decrease from the previous year. Table 2, *MP2 – Cost of Accumulated Deferred Maintenance Needs FY 2004, Reported October 2003,* provides a summary deferred maintenance by institution.

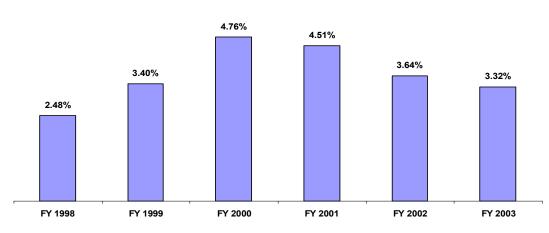

Source: Summary of Campus Master Plans 2001, 2002 and 2003, exluding critical-auxillary deferred maintenance.

#### Accumulated Deferred Maintenance Needs as a Percentage of Replacement Value

The Coordinating Board requests deferred maintenance data to gauge how well institutions are taking care of their facilities. The Board uses the ratio of reported deferred maintenance to building replacement value to evaluate construction project applications that are submitted for review. This ratio is based on the sum of non-critical deferred maintenance and critical deferred maintenance. A high ratio may cause the Board to guestion whether proposed project funds might best be used to address the backlog of deferred maintenance on a campus. Currently, the Board standard for accumulated deferred maintenance to replacement value is 5 percent or less. Critical-auxiliary deferred maintenance is not considered in the deferred maintenance to replacement value ratio as auxiliary enterprise entities receive funds through services provided.

In October 2001, the Board revised the methodology used to calculate building replacement values, resulting in higher replacement values for most institutions. These higher values caused the ratios of deferred maintenance to replacement value to decrease. The decrease continued in FY 2003, as shown in Graph 5.

Graph 5 Accumulated Deferred Maintenance as a Percentage of Replacement Value FY 1998 - 2003

Source: 2001, 2002. 2003 Campus Master Plan Reports (MP2) and THECB-approved replacement values as of January 2004, excluding critical auxillary deferred maintenance.

Thirteen institutions reported accumulated deferred maintenance (ADM) in excess of the 5 percent of replacement value (RV) threshold specified by the Board. Of these, four institutions reported accumulated deferred maintenance to replacement value (ADM:RV) above 10 percent, with Texas A&M University-Galveston reporting values above 20 percent. The thirteen institutions are:

	INSTITUTION	ADM Ratio	INSTITUTION	ADM Ratio
•	Lamar Institute of Technology	0.0602	<ul> <li>Texas A&amp;M University-Galveston</li> </ul>	0.4039
•	Lamar University	0.0603	Texas State University-San Marcos	0.0512
•	Midwestern State University	0.0749	<ul> <li>Texas Southern University</li> </ul>	0.1795
•	Prairie View A&M University	0.1630	<ul> <li>Texas Woman's University</li> </ul>	0.1233
•	Stephen F. Austin State University	0.1140	<ul> <li>University of Houston-Clear Lake</li> </ul>	0.0635
•	Texas A&M University-Commerce	0.0702	<ul> <li>University of Texas at Arlington</li> </ul>	0.0825
	Taylog ARM Linivargity Correspond Christi	0.0554		

- Texas A&M University-Corpus Christi 0.0551

Eight of the institutions mentioned above were listed in last year's report as not meeting the Board's standard for deferred maintenance. Six of these institutions were able to reduce their deferred maintenance to replacement value from the previous year:

INSTITUTION	ADM Ratio <u>FY 2002</u>	ADM Ratio <u>FY 2003</u>
<ul> <li>Texas A&amp;M University-Commerce</li> </ul>	0.2663	0.0582
<ul> <li>Texas Woman's University</li> </ul>	0.1957	0.1011
Texas Southern University	0.2330	0.1745
<ul> <li>Prairie View A&amp;M University</li> </ul>	0.1931	0.1630
<ul> <li>Texas State University-San Marcos</li> </ul>	0.0635	0.0506
Stephen F. Austin State University	0.1022	0.0944

Texas A&M University-Commerce (0.0582 ADM:RV) and Texas State University-San Marcos (0.05 ADM:RV) may be able to meet the Board's standard next year if they continue to be diligent in reducing their deferred maintenance. Two institutions listed last year showed an increase in deferred maintenance: Texas A&M-Galveston (an increase of 2.7 percent) and Lamar Institute of Technology (an increase of 0.4 percent).

Lamar State College-Orange and the University of Houston were removed from the list as they now meet the Board's standard. However, five institutions were added to this list because their ratio of deferred maintenance to replacement value exceeded the Board's standard of 5 percent:

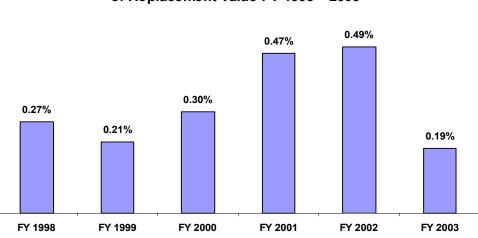

- Lamar University (0.0586 percent)
- Midwestern State University (0.0749 percent)
- Texas A&M Corpus Christi (0.0551 percent)
- University of Houston-Clearlake (0.0635 percent)
- The University of Texas at Arlington (0.0825 percent).

Table 5, *Deferred Maintenance and Critical Deferred Maintenance to Replacement Value Ratio, January 2004,* provides a summary of deferred maintenance to replacement value ratios by institution.

#### Critical Deferred Maintenance Needs as a Percentage of Replacement Value

Deferred maintenance is considered critical if it places the institution's facilities, occupants, or mission at risk. The Coordinating Board's goal is to reduce critical deferred maintenance (CDM) to zero. For FY 2003, CDM made up \$28.9 million (6 percent) of the total \$512.9 million reported for deferred maintenance.

Graph 6 shows considerable increases in CDM over the past three years, reaching a peak in FY 2002 at 0.49 percent. However, CDM for FY 2003 has been considerably reduced to 0.19 percent, a 61 percent reduction over FY 2002 and the lowest level in six years.

Graph 6 Critical Deferred Maintenance as a Percentage of Replacement Value FY 1998 – 2003

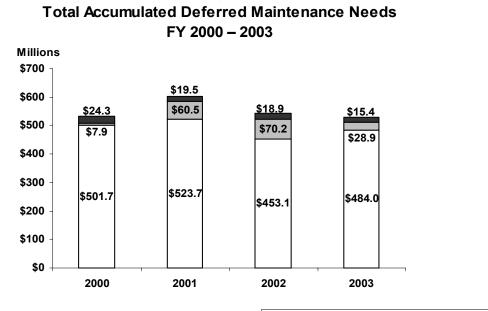

Source: 2001, 2002, 2003 Campus Master Plan (MP2) and THECB approved replacement values as of January 2004

At most institutions, critical deferred maintenance is a relatively small portion of total deferred maintenance. Three institutions reported more than half of their deferred maintenance as critical: The University of Texas at Dallas, The University of Texas at San Antonio, and The University of Texas at Tyler.

#### **Total Accumulated Deferred Maintenance**

Graph 7 shows the proportion of critical, critical-auxiliary, and non-critical deferred maintenance statewide for the past four years. Of the \$528.3 million of assessed deferred maintenance in FY 2003, \$484 million (92 percent) is non-critical, \$28.9 million (5 percent) is critical, and \$15.4 million (3 percent) is critical for auxiliary facilities. Non-critical deferred maintenance increased over FY 2002 as critical and critical-auxiliary continue to decrease since peaking in FY 2001.

Graph 7

Source: 2001, 2002, 2003 Campus Master Plan Reports (MP2)

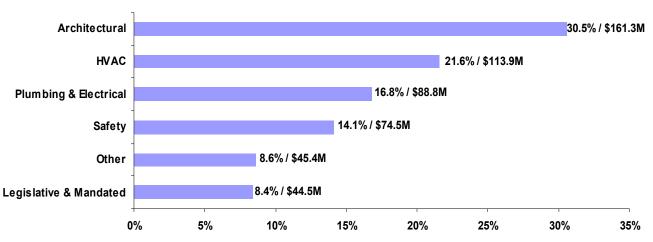

□ Non-Critical □ Critical ■ Critical-Auxiliary

#### Summary of Master Plan 2: Distribution of Accumulated Deferred Maintenance Needs

The Master Plan 2 (MP2) is an itemized listing of all deferred maintenance needs by institution. Graph 8 summarizes the types of projects needed to address current deferred maintenance needs for FY 2003. Of the \$528.3 million needed to correct existing deferred maintenance, \$161.3 million (30.5 percent) is needed for a variety of architectural issues such as roof repairs and replacing floor coverings or windows; \$113.9 million (21.6 percent) is needed to address heating, ventilation, and air-conditioning (HVAC) concerns; \$88.8 million (16.8 percent) is needed to address plumbing and electrical matters; and \$74.5 million (14.1 percent) is needed to address safety issues. "Other" projects make up \$45.4 million (8.6 percent). Legislative and mandated requirements make up \$44.5 million (8.4 percent) of deferred maintenance, which is mostly associated with retrofitting buildings to comply with the Americans with Disabilities Act (ADA) and addressing fire and life safety issues.

The institutions must categorize projects listed on the MP2 as deferred maintenance or demolition projects. Deferred maintenance projects account for \$509 million (96.3 percent) of the total while demolition projects make up \$19.3 million (3.7 percent). The great majority of demolition is based on architectural demolition, which accounts for a total of 60.5 percent of all demolition deferred maintenance requirements.

Table 2, *MP2* - Cost of Accumulated Deferred Maintenance Needs FY 2004, Reported October 2003, provides an overview of deferred maintenance by type of project.

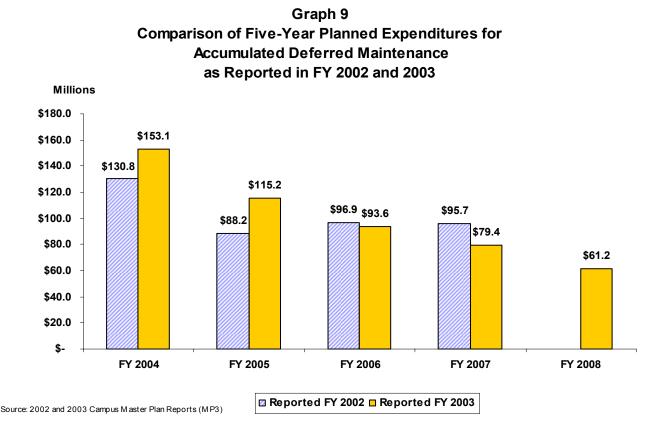

Source: 2003 Campus Master Plan Reports (MP2)

#### Summary of Master Plan 3: Five-Year Plan to Address Accumulated Deferred Maintenance

The Master Plan 3 (MP3) requires institutions to present a timeline of planned deferred maintenance expenditures over the next five years. For FY 2004, the institutions reported a need for \$502.4 million to address deferred maintenance through FY 2008. This does not include \$26 million that is projected beyond FY 2008.

Graph 9 provides a comparison of projected deferred maintenance as reported by the institutions in the FY 2002 and FY 2003 MP3 for FY 2003 and FY 2004, respectively. For the time period FY 2004 through FY 2007, institutions reported that they planned to spend \$30 million more on deferred maintenance than reported in FY 2002 for the same time period. The institutions report that they intend to spend \$268.3 million on deferred maintenance in Fiscal Years 2004-2005 and \$234.2 million for Fiscal Years 2006 through 2008.

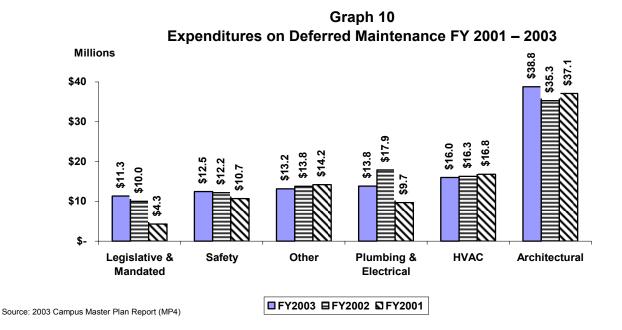

Table 3, *MP3* - Cost of Accumulated Deferred Maintenance Needs FY 2004 – 2008, Reported October 2003, provides a summary of projected deferred maintenance by institution.

#### Summary of Master Plan 4: FY 2003 Expenditures on Deferred Maintenance

The MP4 requires institutions to report actual expenditures on accumulated deferred maintenance for the most recent fiscal year. Institutional spending in FY 2003 for deferred maintenance remained flat when compared to the previous year. The institutions reported expenditures of \$105.6 million on deferred maintenance in FY 2003, only \$100,000 more than in FY 2002.

Graph 10 shows the distribution of expenditures for FY 2001 through FY 2003. The expenditures by project type remain fairly constant when viewed as a percentage of total expenditures for any given year. Architectural (36.7 percent) and HVAC (16.2 percent) make up more than one-half of all expenditures, on average. Plumbing and Electrical (13.5 percent) is a more durable system and requires less continual maintenance. Legislative and Mandated (8.3 percent), Safety (11.6 percent), and "Other" spending (13.6 percent) usually depend on changes in legal and regulatory requirements rather than wear and tear.

Of the 50 institutions reporting master plans, seven had no deferred maintenance expenditures to report for FY 2003:

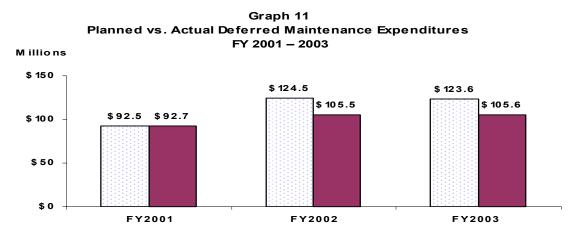

- Texas A&M University-Texarkana
- Sul Ross State University
- The University of Texas at Brownsville
- The University of Texas M.D. Anderson Cancer Center
- The University of Texas Southwestern Medical Center at Dallas
- University of Houston-Victoria
- University of North Texas Health Science Center at Fort Worth

Several institutions exceeded FY 2002 MP3 planned expenditure projections, with four institutions doing so with significant results:

- Texas A&M University at Kingsville (455 percent)
- Texas A&M University-Commerce (164 percent)
- Texas Woman's University (161 percent)
- Texas Tech University Health Sciences Center (109 percent).

Nine other institutions exceeded expectations on an average 28.1 percent. The remaining 30 institutions averaged 50 percent of the projected expenditures for deferred maintenance.

Graph 11 presents a comparison of planned expenditures versus actual expenditures. This provides insight as to how well the institutions are meeting their own deferred maintenance expenditure plans. The institutions met planned goals for deferred maintenance needs in FY 2001. However, overall they have not achieved their planned deferred maintenance expenditures for the past two years. In FY 2002, the institutions fell short by \$19 million and only met 85 percent of their projected need. For FY 2003, institutions again could only meet 85 percent of the spending needs for deferred maintenance, falling short of the \$123.6 million reported in the FY 2002 MP3.

Source: 2001, 2002, 2003 Campus Master Plan Reports (MP3 and MP4)

□ P lanned ■Actual

Further analysis of deferred maintenance spending shows that for FY 2003, the health-related institutions met 91 percent of their planned expenditures. Universities and state colleges are more in line with the overall average of 85.4 percent by achieving 85.1 percent of their projected expenditures. The Texas State Technical Colleges fell below the average by achieving only 47.8 percent of projected maintenance needs. Table 4, *MP4 - Actual Expenditures on Accumulated Deferred Maintenance - FY 2003, Reported October 2003,* provides a list of expenditures by institution.

Institutions that are not meeting planned maintenance needs may find it harder to meet future maintenance needs. By not meeting planned spending goals, the institutions have carried over an additional \$37 million of combined deferred maintenance over the past two years. A comparison of the MP2 and MP3 reports indicates that \$26.0 million in deferred maintenance will not be addressed until beyond the MP3 required five-year projection. The institutions' inability to meet planned deferred maintenance goals may cause projected spending beyond FY 2008 to be extended even further in future years.

#### Conclusions

Texas public universities, health-related institutions, and technical colleges reported relatively small increases in deferred maintenance expenditures, which led to an overall decrease in accumulated deferred maintenance needs for the second consecutive year. However, the decrease can be attributed to institutions addressing critical deferred maintenance and critical auxiliary maintenance at the expense of non-critical deferred maintenance, which increased 6.4 percent over FY 2002.

- The amount of money needed to address accumulated deferred maintenance decreased approximately 2 percent, from \$523.3 million in FY 2002 to \$512.9 million in FY 2003. This, coupled with a 7 percent increase in replacement values, resulted in an overall decrease in the deferred maintenance to replacement value ratio from 3.6 percent to 3.3 percent.
- Thirteen institutions reported accumulated deferred maintenance in excess of the 5 percent of replacement value standard set by the Board, including four institutions reporting more than 10 percent and one institution reporting more than 20 percent.
- Total projected expenditures reported in FY 2002 for accumulated deferred maintenance in FY 2003 were \$123.6 million; however, actual expenditures were flat with an 0.05 percent increase from \$105.50 million in FY 2002 to \$105.56 million in FY 2003.
- Critical deferred maintenance as a percentage of replacement value fell substantially from 0.49 percent in FY 2002 to 0.19 percent in FY 2003.
- Critical deferred maintenance of education and general facilities decreased by 59 percent.
- Critical deferred maintenance in auxiliary facilities decreased for the third year in a row, falling 19 percent from FY 2002 to approximately \$15.4 million.
- Institutions, as an aggregate, could only meet 85 percent of the projected deferred maintenance needs for FY 2003 and FY 2002. This added an additional \$37 million to projected deferred maintenance costs in FY 2003.
- Institutions spent \$105.6 million on deferred maintenance in FY 2003. This is approximately 15 percent less than they reportedly planned to spend. According to plans submitted in FY 2003, institutions plan to spend \$153.1 million to address deferred maintenance in FY 2004.
- Replacement values for educational and general (E&G) space rose approximately 7 percent, from \$14.4 billion in FY 2002 to \$15.5 billion in FY 2003.
- Physical space increased from FY 2002 to FY 2003 with an additional 4.97 million gross square feet, 2.42 million net assignable square feet, and 2.96 million E&G square feet added to institutional inventories.

#### Appendix A Campus Master Plan Report Summaries

This appendix contains summaries of master plan reports submitted by each institution and the replacement value to deferred maintenance ratio for each.

- Table 1, *Replacement Value of Total Available Space, FY 2004*, provides information for the replacement value of Educational and General Square Feet by institution.
- Table 2, *MP2 Cost of Accumulated Deferred Maintenance Needs FY 2004*, shows the estimated cost of remedying deferred maintenance problems at each institution as of October 2003.
- Table 3, *MP3 Cost of Accumulated Deferred Maintenance Needs FY2004 2008*, shows each institution's planned expenditures for remedying existing deferred maintenance over the next five years.
- Table 4, *MP4 Actual Expenditures on Accumulated Deferred Maintenance FY 2003*, is a report of actual expenditures for deferred maintenance during Fiscal Year 2003.
- Table 5, *Deferred Maintenance and Critical Deferred Maintenance to Replacement Value Ratio*, indicates which institutions are meeting the Board's accumulated deferred maintenance to replacement value standard.

Source: THECB facilities inventory as of January 2004 and THECB approved replacement values as of (June 2004)

\* Texas A&M Unversity College of Veterinary Medicine and Texas A&M University System Health Science Center calculations are included with Texas A&M University

Table does not include approximately \$1.6 million in ADM for The University of Texas System and \$790,000 in ADM for the University of Houston System.

Deferred Maintenance includes Critical Deferred Maintenance.

#### Appendix B General Facility Information by Institution

This appendix contains summaries of various building-related information as reported by each institution.

- Table 6, *Building Ownership*, illustrates the number of buildings by ownership through title, for use at no cost or for a nominal fee, leased, and shared with other postsecondary institutions, or various agencies.
- Table 7, *Building Location and Building Age*, shows the number of buildings by physical location, average age of the buildings, and the minimum and maximum age of buildings for each institution.
- Table 8, *Building Functional Type*, shows the number of buildings by functional type for each institution
- Table 9, *Building Condition*, shows the number of buildings by physical condition.
- Table 10, *Building Construction by Type*, illustrates the method of construction for buildings located at each institution.

\* Includes System offices, agencies and other types of facilities.

Satisfactory: The facility is suitable for continued use with normal maintenance

Remodeling A: The facility requires restoration at a cost of <25% of the estimated replacement cost of the building

Remodeling B: The facility requires major physical updating and/or modernization. Cost is >25% and <50% of the estimated replacement cost of the building.

Remodeling C: The facility requires major remodeling. Cost of remodeling is >50% of the estimated replacement cost of the building

Demolition: The facility should be demolished or abandoned due to being unsafe or structurally unsound regardless of the need for space or the availability of funds for replacement.

Termination: Termination or relinquishment of occupancy of the building is planned for reasons other than being unsafe or structurally unsound.

Mothballed: The facility in not currently in use nor has it been schedules for demolition or termination.

## Appendix C Replacement Value Calculations and Summaries

This appendix contains the formulas and calculations used to determine the replacement values of Texas' institutions of higher education. A summary of terms and calculations is provided for a better understanding of the complexities involved in determining replacement values.

- <u>Building Deferred Maintenance to Replacement Value Formulas: Determining</u>
   <u>Replacement Values for Texas Institutions of Higher Education</u> presents a summary of
   terms, formulas and baseline information used to determine replacement values.
- Table 11, *Room Type Coefficient*, provides the coefficients and maximum dollars per square foot for each room type.
- Table 12 *Location Adjustment Coefficient*, lists coefficients by location based on the construction of a 50,000 square foot classroom building constructed in Houston.
- Table 13, *Historical Building Costs*, list the 10 most recently approved classroom and office building construction projects approved by the Board.
- Table 14, Coefficient Comparison FY 2002 vs. 2003, compares room type coefficients.

#### Building Deferred Maintenance to Replacement Value Formulas Determining Replacement Values for Texas Institutions of Higher Education

Overall building replacement value is calculated using an institution's assignable space and building gross square feet, as reported in the facilities inventory, and a baseline dollar per square foot value obtained from historical building costs. An E&G replacement value is calculated using the E&G space reported in the facilities inventory. Values are adjusted for room type and institutional location.

Currently, replacement values for public universities and technical colleges are calculated using the E&G replacement value formula. Replacement values for health-related institutions are calculated using the overall replacement value formula.

## Description of Terms:

- Baseline The average building cost, adjusted for time and location, of the last ten classroom/office buildings greater than 50,000 GSF that were approved by the Coordinating Board. As of January 2004, the average construction cost is \$194.88 per GSF.
  - ∑= (Building Cost + Fixed Equipment + Fees)/GSF
- E&G Educational and General square feet, as reported in the facilities inventory
- ASF Assignable Square Feet, as reported in the facilities inventory
- GSF Gross Square Feet, as reported in the facilities inventory
- LAC The Location Adjustment Coefficient is calculated using R.S. Means Historical Cost Indexes (via http://www.firstsourceonl.com/) and the institution's main campus zip code. It is the ratio of the cost of constructing a classroom building in a particular location to the cost of constructing that same building in Houston, currently the area of the state where construction costs are highest. This adjustment is necessary to offset the adjustment made when calculating the baseline cost. The coefficients are recalculated on an annual basis.
- RAC Room Adjustment Coefficients are used to adjust the baseline cost to factor in the costs associated with constructing certain types of rooms. It is the ratio of the maximum square foot cost of the building type that most closely matches the room type to the maximum square foot cost of a classroom building (the building type used to calculate the baseline in FY 2004). A coefficient for each room type is the sum of the cost for construction of that room type divided by the room type baseline. Costs were obtained from *R.S. Means Square Foot Costs 2003*, 24th Edition, R.S. Means Construction Publishers & Consultants, 2002 Kingston MA. The coefficients are recalculated on an annual basis.

## Formulas:

Building E&G Replacement Value =

 $\sum \left[ E \& G_{\text{room}} \times \textit{Baseline} \times \textit{LAC}_{\text{inst}} \times \textit{RAC}_{\text{room}} \times \left( \textit{GSF}_{\textit{bldg}} \div \textit{ASF}_{\textit{bldg}} \right) \right]$ 

Overall Building Replacement Value =

 $\sum \left[ \textit{ASF}_{\textit{room}} \times \textit{Baseline} \times \textit{LAC}_{\textit{inst}} \times \textit{RAC}_{\textit{room}} \times \left( \textit{GSF}_{\textit{bldg}} \div \textit{ASF}_{\textit{bldg}} \right) \right]$ 

The building replacement formulas apply only to buildings owned by the institution (Building Ownership Codes 1, 2, or 3 in the Facilities Inventory). Only these building type codes are included in the replacement value:

- Code 1: General Purpose Buildings
- Code 2: Academic/Residence Buildings
- Code 3: Auxiliary Buildings
- Code 4: Physical Plant Buildings
- Code 5: Agricultural Services Buildings
- Code 6: Residence, Single
- Code 7: Residence, Family
- Code H: Hospitals/Clinics
- Code R: Renovations

If Building Ownership Code = 1, 2, or 3 <u>AND</u> the Building Type Code = 1, 2, 3, 4, 5, H, or R, then the building's E&G and Overall Building Replacement Values would be calculated using the given formulas.

Although institutions are required to report E&G space for residential facilities (Codes 6 and 7), they are not required to enter all assignable space for residential room types in the facilities inventory. Because not all the rooms in the building are always reported, the total assignable area is automatically calculated to be 60 percent of the gross square feet of the building. To include the residential rooms in the overall replacement value, room type coefficients 910 and 970 are used for the assignable space that cannot be assigned to a room type in the inventory:

RACroom = RAC910 for Code 6 building types and RACroom = RAC970 for Code 7 building types

If the Building Type Code = 6 or 7 <u>AND</u> it does not have any reported assignable space, then apply the formulas using the building's auto-calculated assignable space.

If the Building Type Code = 6 or 7 <u>AND</u> it has reported assignable space, then:

- 1. Calculate the Building E&G replacement value
- 2. Sum the Assignable Square Feet for the reported rooms.
- 3. Subtract the Assignable Square Feet for the reported rooms from the auto-calculated assignable space reported in the facilities inventory to obtain the amount of assignable square feet that cannot be assigned to a reported room type.
- 4. Calculate the Overall Building Replacement Value using the assignable square feet reported for each room against each room's RAC and the assignable square feet left over against RAC910 or RAC970, depending upon the Building Type Code.
